*Energy, expertise and momentum
to take sports experience
to the next level*

Syska Hennessy Group

The business bridge

Sports venues are the most dynamic, sophisticated, versatile and exhilarating places in the world. So, too, should be the people and processes that create them. That's our approach to the inspiring business of designing for sports facilities. It's a challenge that engages our best people and brightest ideas – and produces winning solutions for our design partners and clients.

Building a sports facility is by nature a complex and risky undertaking. Technical excellence and outstanding execution are vital. Reliability and lean first costs are baseline goals. Through creativity and experience, we bring a higher caliber of competence to the forefront. Sports facilities rely on many design specialties – and we provide more of them, with our strength in building MEP systems, sustainable design, lighting design, security, vertical transportation, technology, telecommunications, on-site energy generation, public assembly and media broadcast. As a result, we can help provide a facility that operates smarter and longer, accommodates more people and diverse events, originates and televises live entertainment, and generates greater revenues. Choosing us gives you a solid bridge from your vision to a bottom-line business success.

Technical masters

The convergence of sports and entertainment in our culture vastly expands the potential of the traditional sports concept. Our experience has made us experts at the technical requirements and nuances of these venues – engineering utility service on everything from retractable seating to retractable roofing, controlling everything from ice quality to air quality. Our work spans the professional and collegiate realms including arenas for basketball and ice hockey; stadiums for football, baseball and soccer; aquatics and tennis facilities; and multi-purpose recreation centers.

Engineering every angle on success

In the last decade, Syska Hennessy Group has designed and consulted on over 15 million square feet of public assembly space, making us a national leader in the field. We know how to configure, operate, expand and adapt multi-purpose facilities, achieving cost efficiencies that meet your business drivers.

By integrating our experience in sports, entertainment and public assembly, the Syska Hennessy team delivers complete knowledge, service and commitment. Call on us to empower your project with the energy, experience and momentum to achieve success.
